Racial Residential Segregation and Child Mortality in the Southern United States at the Turn of the Twentieth Century

Dr. Hacker is a demographic historian with expertise in nineteenth and early twentieth century census data and the use of indirect methods to estimate long-term population trends and differentials. He will be sharing his new paper authored with J’Mag Karbeah, Assistant Professor in the School of Public Health at the University of Minnesota, examining the association between racial residential segregation and child mortality in the South at the turn of the twentieth century.
